AquaPlanet Introduces FireBoss™ Pool Fire Pump for Emergency Water Transfer and Property Protection

SUMMARY

Portable high-pressure pump draws water from swimming pools and other available sources while creating a new product and service opportunity for pool professionals.

PRESS RELEASE BODY

SANTA ANA, Calif., August 21, 2026 — AquaPlanet today announced the availability of the FireBoss™ Pool Fire Pump, a portable high-pressure water-transfer system designed to help homeowners, property managers and pool professionals draw water from swimming pools and other available sources for emergency response support, irrigation and property-protection applications.

With a suggested retail price of $1,499, FireBoss combines a 223cc four-stroke OHV engine, a high-pressure two-inch water pump, a heavy-duty steel cart and a complete hose kit in one transportable system. The unit delivers water at up to 164 gallons per minute and a maximum pressure of 65 PSI.

“In many fire-prone communities, homeowners have thousands of gallons of water sitting in their swimming pools but no practical way to access and direct it when it may be needed most,” said Lyann Courant, CEO of AquaPlanet. “FireBoss provides a portable and straightforward way to make that available water source more accessible as part of a broader emergency-preparedness plan.”

The FireBoss system includes a 12-foot suction hose, a 50-foot discharge hose with nozzle and two hose-storage hooks. Its heavy-duty steel cart and 10-inch pneumatic wheels are designed to make the unit easier to move across driveways, yards and uneven terrain.

Key FireBoss specifications include:

- 223cc four-stroke OHV engine
- Maximum flow of 164 gallons per minute and maximum pressure of 65 PSI
- 25-foot maximum suction lift, 149-foot maximum discharge lift and 174-foot maximum total lift
- Two-inch pump inlet and outlet
- Spark arrestor and one-gallon fuel tank
- 12-foot suction hose and 50-foot discharge hose with nozzle
- Two-year limited warranty

In addition to emergency water transfer and property-protection support, FireBoss can be used for irrigation, landscape watering, agricultural applications and other situations requiring portable, high-volume water movement.

The product also gives pool service companies, builders and retailers an opportunity to add emergency-preparedness equipment to their offerings, particularly in wildfire-prone markets. Qualified pool professionals, dealers and distributors can apply for AquaPlanet TradePro and wholesale pricing.

“Pool professionals already have trusted relationships with homeowners and understand their customers’ pools and equipment,” Courant said. “FireBoss gives them a relevant new product to offer, along with the potential to provide periodic inspection, testing and maintenance services.”

FireBoss ships in a parcel-capable, retail-ready carton designed for easier handling, storage and in-store presentation. Product and dealer information is available at https://theaquaplanet.com/products/pool-fire-pump-with-cart-and-hose-kit.

FireBoss is intended to support emergency water transfer and property-protection efforts. It does not replace professional firefighters or emergency services. In any fire emergency, occupants should follow evacuation orders, call 911 and never remain in an unsafe area to operate the equipment.
